

Bioasis 6 Mission

Inspirational biology and geography teachers wanted for dangerous mission.

The year is 2074. Following the climate change apocalypse, the world is in crisis. Yet a remote, natural paradise, known as The Bioasis, has somehow survived. Your mission is to assemble a team, locate The Bioasis and undertake a 6 day adventure to start the process of rewilding planet earth.

To be successful, students and teachers must work together, solve problems, learn camera trapping and biodiversity monitoring techniques, locate and recover food and equipment drops and learn about living sustainably off-grid. There will be danger, adventure, wild animals, challenges to overcome and industrialist saboteurs to avoid. Are you mission ready?
